New high clearance steering knuckles, included with this kit, require the “Steering Dual Rate” knob to be set as shown. A higher setting may damage the vehicle.

This Redcat Racing Everest Gen7 Sport has been upgraded!

This vehicle now includes “High Steer” steering knuckles. (Part number 13863). These new knuckles allow for a much greater steering angle than previous versions of the Gen7 Sport.

The steering dual rate has been preset from the factory at 60. Do not adjust the dual rate to anything higher than 60 or the drivetrain will bind and severely damage steering components.
